OBJECTIVE

The Milliman Healthcare Inflation Guard ETF (MHIG) seeks to generate returns (before Fund fees and expenses) that are generally equivalent to the U.S. healthcare cost inflation rate.

The Fund seeks to achieve its investment objective by investing in a combination of assets that Milliman Financial Risk Management LLC, believes will produce returns that are generally equivalent to the U.S. healthcare cost inflation rate.

REASONS TO INVEST

- 

Investment strategy designed to seek to generate returns that are generally equivalent to the U.S. healthcare cost inflation rate
- 

World's preeminent healthcare actuarial firm uses industry insights and proprietary claims data to inform strategy
- 

Actively managed, multi-asset ETF uses quantitative models to dynamically manage risk

GROWTH SINCE INCEPTION

Data as of 6/30/2026. The Milliman Healthcare Inflation Guard ETF (MHIG) inceptioned on 4/21/2026. Performance quoted represents past performance, which does not guarantee future results. On April 17, 2026, all of the assets of a separately managed account (the "Predecessor Account"), which had been managed by Milliman since April 22, 2024, and had investment policies, objectives, guidelines and restrictions that were in all material respects equivalent to those of the Fund, were transferred to the Fund in a tax-free transaction (the "Transaction"). Performance shown for periods prior to the date of the Transaction represents the performance of the Predecessor Account. Prior to the date of the Transaction, the Fund had not commenced investment operations. The Predecessor Account was not registered under the 1940 Act and therefore was not subject to certain investment restrictions that are imposed by the 1940 Act on registered investment companies. If the Predecessor Account had been registered under the 1940 Act, the Predecessor Account's performance may have been adversely affected.

PERFORMANCE

	1 MO	3 MO	6 MO	YTD	1 YR	SINCE INCEPTION
ETF Nav	-1.66%	0.99%	-0.18%	0.27%	12.40%	11.54%

Bloomberg U.S. TIPS	-0.47%	0.99%	1.20%	1.24%	3.51%	5.42%
Bloomberg U.S. Aggregate	0.24%	0.87%	0.52%	0.62%	3.79%	5.64%

Data as of 6/30/2026. The Milliman Healthcare Inflation Guard ETF (MHIG) inceptioned on 4/21/2026. Bloomberg U.S. Aggregate Index represents the U.S. investment-grade fixed-rate bond market. This index is unmanaged, and its results include reinvested dividends and/or distributions but do not reflect the effect of sales charges, commissions, account fees, expenses, or U.S. federal income taxes. The Bloomberg U.S. Treasury Inflation-Linked Bond Index (Series-L) measures the performance of the U.S. Treasury Inflation Protected Securities (TIPS) market. **Performance quoted represents past performance, which does not guarantee future results. Investment returns and principal value will fluctuate, and investors may experience gains or losses when shares are sold. Current performance may be higher or lower than the performance shown. For the most recent month-end performance, visit millimanetfs.com/mhig.**

Index performance is shown for illustrative purposes only. One cannot invest directly in an index, and index returns do not reflect fund fees or expenses. Shares of any ETF are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Brokerage commissions will reduce returns.

RISK ALLOCATION

HEALTHCARE EQUITY INDUSTRY ALLOCATION

Investing involves risk. Principal loss is possible.

Risk of Estimating U.S. Healthcare Cost Inflation. The Quantitative Model seeks to produce returns, before Fund fees and expenses, that are correlated to the U.S. healthcare cost inflation rate as measured by the MI Actuarial Analysis. The MI Actuarial Analysis is proprietary, and its measure of the U.S. healthcare cost inflation rate may differ materially from other U.S. healthcare cost inflation measures. **Model Calculation**

Risk. The Fund may be adversely affected by imperfections, errors or limitations in the construction or implementation of the Quantitative Model and/or Milliman's ability to monitor and timely adjust the metrics or update the data or features underlying the Quantitative Model. The Quantitative Model relies on various sources of information to assess the criteria of the selected components, including information that may be based on assumptions and estimates, and there can be no guarantee that the Quantitative Model will produce the intended results. **Correlation Risk.** A number of factors may affect the Fund's ability to achieve a high degree of correlation with the U.S. healthcare cost inflation rate, as measured by the MI Actuarial Analysis, and there is no guarantee that the Fund will achieve a high degree of correlation.

Equity Securities Risk. Equity securities are more volatile than those of fixed income securities. The prices of equity securities may fluctuate in response to issuer-specific activities, as well as factors unrelated to the fundamental condition of the issuer, including general market, economic and political conditions along with other factors. **ADRs Risk.** ADRs may expose the Fund to additional risks associated with non-uniform terms that apply to depository receipt programs, including credit exposure to the depository bank and to the sponsors and other parties with whom the depository bank establishes the programs, currency, political, economic, market risks and the risks of an illiquid market for ADRs. **Healthcare Sector Risk.** Factors such as extensive government regulation, restrictions on government reimbursement for medical expenses, rising costs of medical products, services and facilities, pricing pressure, an increased emphasis on outpatient services, a limited number of products, industry innovation, costs associated with obtaining and protecting patents, product liability and other claims, changes in technologies and other market developments can adversely affect companies in the healthcare sector and, therefore, the Fund's returns.

Small and Medium Capitalization Companies Risk. Investing in the securities of small and medium capitalization companies generally involves greater risk than investing in larger, more established companies. The securities of small and medium

capitalization companies may be more volatile and less liquid than securities of larger, more established companies or the market averages in general. **Derivatives Risk.** The use of derivatives, including swaps, options and futures, involves a variety of risks, which may be different from, or greater than, the risks associated with investing in traditional securities, such as stocks and bonds. Changes in the value of a derivative may not correlate perfectly with, and may be more sensitive to market events than, the underlying asset, rate or index, and a derivative instrument may expose the Fund to losses in excess of its initial investment. **Debt Securities**

Risk. The prices of debt securities will be affected by changes in interest rates, the creditworthiness of the issuer and other factors. During periods of falling interest rates, an issuer of a callable bond may repay the security before its stated maturity, and the Fund may have to reinvest the proceeds in securities with lower yields, which would result in a decline in the Fund's income, or in securities with greater risks or with other less favorable features. An increase in interest rates will generally cause the value of fixed-income securities held by the Fund to decline, may lead to heightened volatility in the fixed-income markets and may adversely affect the liquidity of certain fixed-income investments. **U.S. Government Securities Risk.** U.S. Government securities are subject to interest rate risk, but generally do not involve the credit risks associated with investments in other types of debt securities. As a result, the yields available from U.S. Government securities are generally lower than the yields available from other debt securities.

TIPS Risk. The value of inflation protected securities, such as TIPS, generally will fluctuate in response to changes in interest rates, generally decreasing when real interest rates rise and increasing when real interest rates fall. **Risks of Investing in Commodities.** Investing in commodities exposes the Fund to the risks of the commodities markets, which may subject the Fund to greater volatility than investments in traditional asset classes, such as stocks and bonds. Volatility in commodities markets may be caused by a number of factors, including changes in overall market movements, changes in inflation and changes in demand for such asset classes. Commodity prices can have significant volatility, and exposure to commodities can cause the value of the Shares to decline or fluctuate in a rapid and unpredictable manner. **Issuer Risk.** The performance of the Fund depends on the performance of individual securities to which the Fund has exposure. The Fund may be adversely affected if an issuer of underlying securities held by the Fund is unable or unwilling to repay principal or interest when due. Changes in the financial condition or credit

rating of an issuer of those securities may cause the value of the securities to decline.
